

VACCINE Malone Defines Nano Technology (Mihalcea)

Dr Malone, in the podcast, explains in an easy-to-understand style, about the lipid nanoparticles, defining the terms, what is going on and debunks what Mihalcea and Kingston are saying. Mihalcea and Kingston define the terms differently which makes it seem like a different technology is there in addition to what is in it. He explains what looks like “self-assembly” and why it is occurring—which is a result of negatively and positively charged materials—which are not being directed by Artificial Intelligence.

There is still the problem with the mRNA technology being used for the vaccines and it needs taken off the market.

The video above is a primer on “lipid nanoparticles”, also known as cationic liposomes or nano technology. This video is not going to be for everyone, but it is intended for those who truly wish to understand mechanisms behind the the mRNA delivery technologies. This video this will help explain many of the mysteries of non-viral gene transfer and mRNA ...
